presents

Operations in Large/Complex Structures

April 7-8 2010 @ 08:30 hours

The program

This comprehensive hands-on program will focus on fire suppression operations in a large and complex structures. Whether the objective is searching for life, fire, a downed firefighter or advancing a hose line deep into one of these structures, one thing is for sure; *the operations will be manpower intensive and very dangerous.*

Firefighters must realize this low frequency, extremely high risk event differs greatly from a “bread and butter” room and contents fire. A fire in a large building can be difficult and fast spreading. Whether it's in a family business in rural America or a mega mall in a big city, sooner or later you will have an incident in one of these structures.

Firefighters will gain an appreciation for a strong command presence, knowledge of large area search procedures and the realization that an incident in a large/complex structure can become a firefighter's nightmare. Following an interactive lecture demonstrating “best practices” this program will transition to the field for a series of intense, challenging exercises. This program is appropriate for the new firefighter or company officer as well as the experienced chief officer as all aspect of operations in large/complex structure will be integrated in the field exercises.

The lead instructor :

Sean O'Brien / FDNY Tower Ladder 131

Sean is currently assigned to Tower Ladder 131 in Brooklyn with the Fire Department City of New York. With a wide array of building construction in his first due area, Sean brings extensive knowledge and experience in specializing in truck company operations. He specializes in SOC Rescue Operations (Trench Rescue, Confined Space, Rigging Operations).
